Can fuller head of hair help Rooney score more goals?

Can it be true that fuller hair allows you to score more goals?
The Bookies say that WAYNE ROONEY'S hair transplant will help him score at least four headers next season.

Scientifically there is no evidence that bald men are worse than full headed men in scoring goals. Perhaps a fuller set of hair can give one more confidence. Looking and feeling like a younger person rather than one approaching middle age can make you feel better within yourself. This may help you feel like you were when you were younger – a time when you had more energy and youthfulness.

Hair transplants are not for everyone. They are expensive and for the majority, hair loss and hair thinning is not so extensive or such a grave problem. Use the NUTRIGRO system- N for nutrition, have plenty of salads and complete protein(after all hair is 97% protein), Use natural non-harsh chemical hair products, Train to be trim to encourage more blood reaching the scalp, Routinely lose toxins through ways such as head massage and Imagine the hair of your dreams- you have to ask the universe what you want to increase the chances of getting it, for GROwth of hair.
